

Range of  $\Rightarrow 0 \leq p\text{-value} \leq 1$   
 $p\text{-value}$

## Significance of $p\text{-value}$ :-

\* NULL Hypothesis

\* alternate Hypothesis

1. Problem statement

2. Data collection & preparation

3. Training & testing split

4. Validation state

5. Result

~~$p = 0.05$  or 5%~~

If  $p \leq 0.05$ , reject NULL Hypothesis  
 & accept alternate hypothesis

If  $p > 0.05$ , reject alternate  
 hypothesis & accept NULL Hypo.

NULL Hypothesis statement : Assumption

regarding data.  
 set of possible results indicate probability density.

Alternate hypothesis is alternative assumption for data. For this diagram we can state alternate hypo. as there is no relation b/w set of possible results & probability density.

based on similar features we categorize them into groups
