

Property	Description
align-content	Specifies the alignment of flexible container's items within the flex container.
align-items	Specifies the default alignment for items within the flex container.
align-self	Specifies the alignment for selected items within the flex container.
animation	Specifies the keyframe-based animations.
animation-delay	Specifies when the animation will start.
animation-direction	Specifies whether the animation should play in reverse on alternate cycles or not.
animation-duration	Specifies the number of seconds or milliseconds an animation should take to complete one cycle.
animation-fill-mode	Specifies how a CSS animation should apply styles to its target before and after it is executing.
animation-iteration-count	Specifies the number of times an animation cycle should be played before stopping.
animation-name	Specifies the name of <code>@keyframes</code> defined animations that should be applied to the selected element.
animation-play-state	Specifies whether the animation is running or paused.
animation-timing-function	Specifies how a CSS animation should progress over the duration of each cycle.
backface-visibility	Specifies whether or not the "back" side of a transformed element is visible when facing the user.
background	Defines a variety of background properties within one declaration.
background-attachment	Specify whether the background image is fixed in the viewport or scrolls.
background-clip	Specifies the painting area of the background.
background-color	Defines an element's background color.
background-image	Defines an element's background image.
background-origin	Specifies the positioning area of the background images.
background-position	Defines the origin of a background image.
background-repeat	Specify whether/how the background image is tiled.
background-size	Specifies the size of the background images.

Property	Description
<code>border</code>	Sets the width, style, and color for all four sides of an element's border.
<code>border-bottom</code>	Sets the width, style, and color of the bottom border of an element.
<code>border-bottom-color</code>	Sets the color of the bottom border of an element.
<code>border-bottom-left-radius</code>	Defines the shape of the bottom-left border corner of an element.
<code>border-bottom-right-radius</code>	Defines the shape of the bottom-right border corner of an element.
<code>border-bottom-style</code>	Sets the style of the bottom border of an element.
<code>border-bottom-width</code>	Sets the width of the bottom border of an element.
<code>border-collapse</code>	Specifies whether table cell borders are connected or separated.
<code>border-color</code>	Sets the color of the border on all the four sides of an element.
<code>border-image</code>	Specifies how an image is to be used in place of the border styles.
<code>border-image-outset</code>	Specifies the amount by which the border image area extends beyond the border box.
<code>border-image-repeat</code>	Specifies whether the image-border should be repeated, rounded or stretched.
<code>border-image-slice</code>	Specifies the inward offsets of the image-border.
<code>border-image-source</code>	Specifies the location of the image to be used as a border.
<code>border-image-width</code>	Specifies the width of the image-border.
<code>border-left</code>	Sets the width, style, and color of the left border of an element.
<code>border-left-color</code>	Sets the color of the left border of an element.
<code>border-left-style</code>	Sets the style of the left border of an element.
<code>border-left-width</code>	Sets the width of the left border of an element.
<code>border-radius</code>	Defines the shape of the border corners of an element.
<code>border-right</code>	Sets the width, style, and color of the right border of an element.

Property	Description
<code>border-right-color</code>	Sets the color of the right border of an element.
<code>border-right-style</code>	Sets the style of the right border of an element.
<code>border-right-width</code>	Sets the width of the right border of an element.
<code>border-spacing</code>	Sets the spacing between the borders of adjacent table cells.
<code>border-style</code>	Sets the style of the border on all the four sides of an element.
<code>border-top</code>	Sets the width, style, and color of the top border of an element.
<code>border-top-color</code>	Sets the color of the top border of an element.
<code>border-top-left-radius</code>	Defines the shape of the top-left border corner of an element.
<code>border-top-right-radius</code>	Defines the shape of the top-right border corner of an element.
<code>border-top-style</code>	Sets the style of the top border of an element.
<code>border-top-width</code>	Sets the width of the top border of an element.
<code>border-width</code>	Sets the width of the border on all the four sides of an element.
<code>bottom</code>	Specify the location of the bottom edge of the positioned element.
<code>box-shadow</code>	Applies one or more drop-shadows to the element's box.
<code>box-sizing</code>	Alter the default CSS box model.
<code>caption-side</code>	Specify the position of table's caption.
<code>clear</code>	Specifies the placement of an element in relation to floating elements.
<code>clip</code>	Defines the clipping region.
<code>color</code>	Specify the color of the text of an element.
<code>column-count</code>	Specifies the number of columns in a multi-column element.
<code>column-fill</code>	Specifies how columns will be filled.
<code>column-gap</code>	Specifies the gap between the columns in a multi-column element.
<code>column-rule</code>	Specifies a straight line, or "rule", to be drawn between each column in a multi-column element.
<code>column-rule-color</code>	Specifies the color of the rules drawn between columns in a multi-column layout.

Property	Description
column-rule-style	Specifies the style of the rule drawn between the columns in a multi-column layout.
column-rule-width	Specifies the width of the rule drawn between the columns in a multi-column layout.
column-span	Specifies how many columns an element spans across in a multi-column layout.
column-width	Specifies the optimal width of the columns in a multi-column element.
columns	A shorthand property for setting <code>column-width</code> and <code>column-count</code> properties.
content	Inserts generated content.
counter-increment	Increments one or more counter values.
counter-reset	Creates or resets one or more counters.
cursor	Specify the type of cursor.
direction	Define the text direction/writing direction.
display	Specifies how an element is displayed onscreen.
empty-cells	Show or hide borders and backgrounds of empty table cells.
flex	Specifies the components of a flexible length.
flex-basis	Specifies the initial main size of the flex item.
flex-direction	Specifies the direction of the flexible items.
flex-flow	A shorthand property for the <code>flex-direction</code> and the <code>flex-wrap</code> properties.
flex-grow	Specifies how the flex item will grow relative to the other items inside the flex container.
flex-shrink	Specifies how the flex item will shrink relative to the other items inside the flex container.
flex-wrap	Specifies whether the flexible items should wrap or not.
float	Specifies whether or not a box should float.
font	Defines a variety of font properties within one declaration.
font-family	Defines a list of fonts for element.
font-size	Defines the font size for the text.
font-size-adjust	Preserves the readability of text when font fallback occurs.
font-stretch	Selects a normal, condensed, or expanded face from a font.

Property	Description
font-style	Defines the font style for the text.
font-variant	Specify the font variant.
font-weight	Specify the font weight of the text.
height	Specify the height of an element.
justify-content	Specifies how flex items are aligned along the main axis of the flex container after any flexible lengths and auto margins have been resolved.
left	Specify the location of the left edge of the positioned element.
letter-spacing	Sets the extra spacing between letters.
line-height	Sets the height between lines of text.
list-style	Defines the display style for a list and list elements.
list-style-image	Specifies the image to be used as a list-item marker.
list-style-position	Specifies the position of the list-item marker.
list-style-type	Specifies the marker style for a list-item.
margin	Sets the margin on all four sides of the element.
margin-bottom	Sets the bottom margin of the element.
margin-left	Sets the left margin of the element.
margin-right	Sets the right margin of the element.
margin-top	Sets the top margin of the element.
max-height	Specify the maximum height of an element.
max-width	Specify the maximum width of an element.
min-height	Specify the minimum height of an element.
min-width	Specify the minimum width of an element.
opacity	Specifies the transparency of an element.
order	Specifies the order in which a flex items are displayed and laid out within a flex container.
outline	Sets the width, style, and color for all four sides of an element's outline.
outline-color	Sets the color of the outline.
outline-offset	Set the space between an outline and the border edge of an element.

Property	Description
outline-style	Sets a style for an outline.
outline-width	Sets the width of the outline.
overflow	Specifies the treatment of content that overflows the element's box.
overflow-x	Specifies the treatment of content that overflows the element's box horizontally.
overflow-y	Specifies the treatment of content that overflows the element's box vertically.
padding	Sets the padding on all four sides of the element.
padding-bottom	Sets the padding to the bottom side of an element.
padding-left	Sets the padding to the left side of an element.
padding-right	Sets the padding to the right side of an element.
padding-top	Sets the padding to the top side of an element.
page-break-after	Insert a page breaks after an element.
page-break-before	Insert a page breaks before an element.
page-break-inside	Insert a page breaks inside an element.
perspective	Defines the perspective from which all child elements of the object are viewed.
perspective-origin	Defines the origin (the vanishing point for the 3D space) for the perspective property.
position	Specifies how an element is positioned.
quotes	Specifies quotation marks for embedded quotations.
resize	Specifies whether or not an element is resizable by the user.
right	Specify the location of the right edge of the positioned element.
tab-size	Specifies the length of the tab character.
table-layout	Specifies a table layout algorithm.
text-align	Sets the horizontal alignment of inline content.
text-align-last	Specifies how the last line of a block or a line right before a forced line break is aligned when <code>text-align</code> is <code>justify</code> .
text-decoration	Specifies the decoration added to text.
text-decoration-color	Specifies the color of the <code>text-decoration-line</code> .

Property	Description
text-decoration-line	Specifies what kind of line decorations are added to the element.
text-decoration-style	Specifies the style of the lines specified by the <code>text-decoration-line</code> property
text-indent	Indent the first line of text.
text-justify	Specifies the justification method to use when the <code>text-align</code> property is set to <code>justify</code> .
text-overflow	Specifies how the text content will be displayed, when it overflows the block containers.
text-shadow	Applies one or more shadows to the text content of an element.
text-transform	Transforms the case of the text.
top	Specify the location of the top edge of the positioned element.
transform	Applies a 2D or 3D transformation to an element.
transform-origin	Defines the origin of transformation for an element.
transform-style	Specifies how nested elements are rendered in 3D space.
transition	Defines the transition between two states of an element.
transition-delay	Specifies when the transition effect will start.
transition-duration	Specifies the number of seconds or milliseconds a transition effect should take to complete.
transition-property	Specifies the names of the CSS properties to which a transition effect should be applied.
transition-timing-function	Specifies the speed curve of the transition effect.
vertical-align	Sets the vertical positioning of an element relative to the current text baseline.
visibility	Specifies whether or not an element is visible.
white-space	Specifies how white space inside the element is handled.
width	Specify the width of an element.
word-break	Specifies how to break lines within words.
word-spacing	Sets the spacing between words.
word-wrap	Specifies whether to break words when the content overflows the boundaries of its container.

Property	Description
z-index	Specifies a layering or stacking order for positioned elements.
