

# Unit 3

## **ELEMENTS OF HTML**

# What is Multimedia?

Multimedia comes in many different formats. It can be almost anything you can hear or see, like images, music, sound, videos, records, films, animations, and more.

Web pages often contain multimedia elements of different types and formats.

## Multimedia Formats

Multimedia elements (like audio or video) are stored in media files.

The most common way to discover the type of a file, is to look at the file extension.

Multimedia files have formats and different extensions like: .wav, .mp3, .mp4, .mpg, .wmv, and .avi.

## Common Video Formats

There are many video formats out there.

The MP4, WebM, and Ogg formats are supported by HTML.

The MP4 format is recommended by YouTube.

**Note:** Only MP4, WebM, and Ogg video are supported by the HTML standard.

**Note:** Only MP3, WAV, and Ogg audio are supported by the HTML standard.

Format	File	Description
MPEG	.mpg .mpeg	MPEG. Developed by the Moving Pictures Expert Group. The first popular video format on the web. Not supported anymore in HTML.
AVI	.avi	AVI (Audio Video Interleave). Developed by Microsoft. Commonly used in video cameras and TV hardware. Plays well on Windows computers, but not in web browsers.
WMV	.wmv	WMV (Windows Media Video). Developed by Microsoft. Commonly used in video cameras and TV hardware. Plays well on Windows computers, but not in web browsers.
QuickTime	.mov	QuickTime. Developed by Apple. Commonly used in video cameras and TV hardware. Plays well on Apple computers, but not in web browsers.
RealVideo	.rm .ram	RealVideo. Developed by Real Media to allow video streaming with low bandwidths. Does not play in web browsers.
Flash	.swf .flv	Flash. Developed by Macromedia. Often requires an extra component (plug-in) to play in web browsers.
Ogg	.ogg	Theora Ogg. Developed by the Xiph.Org Foundation. Supported by HTML.
WebM	.webm	WebM. Developed by Mozilla, Opera, Adobe, and Google. Supported by HTML.
MPEG-4 or MP4	.mp4	MP4. Developed by the Moving Pictures Expert Group. Commonly used in video cameras and TV hardware. Supported by all browsers and recommended by YouTube.

# Common Audio Formats

MP3 is the best format for compressed recorded music. The term MP3 has become synonymous with digital music. If your website is about recorded music, MP3 is the

Format	File	Description
MIDI	.mid .midi	MIDI (Musical Instrument Digital Interface). Main format for all electronic music devices like synthesizers and PC sound cards. MIDI files do not contain sound, but digital notes that can be played by electronics. Plays well on all computers and music hardware, but not in web browsers.
RealAudio	.rm .ram	RealAudio. Developed by Real Media to allow streaming of audio with low bandwidths. Does not play in web browsers.
WMA	.wma	WMA (Windows Media Audio). Developed by Microsoft. Plays well on Windows computers, but not in web browsers.
AAC	.aac	AAC (Advanced Audio Coding). Developed by Apple as the default format for iTunes. Plays well on Apple computers, but not in web browsers.
WAV	.wav	WAV. Developed by IBM and Microsoft. Plays well on Windows, Macintosh, and Linux operating systems. Supported by HTML.
Ogg	.ogg	Ogg. Developed by the Xiph.Org Foundation. Supported by HTML.
MP3	.mp3	MP3 files are actually the sound part of MPEG files. MP3 is the most popular format for music players. Combines good compression (small files) with high quality. Supported by all browsers.

```
<html>
<title>Working with Multimedia</title>
<head><h1>Multimedia</h1></head>
<body>
```

```
<video width="320" height="240" controls>
  <source src="movie.mp4" type="video/mp4">
  <!source src="movie.ogg" type="video/ogg">
```

Your browser does not support the video tag.

```
</video>
</body>
</html>
```

# How it Works

- The `controls` attribute adds video controls, like play, pause, and volume.
- It is a good idea to always include `width` and `height` attributes. If height and width are not set, the page might flicker while the video loads.
- The `<source>` element allows you to specify alternative video files which the browser may choose from. The browser will use the first recognized format.
- The text between the `<video>` and `</video>` tags will only be displayed in browsers that do not support the `<video>` element.

## HTML <video> Autoplay

To start a video automatically, use the **autoplay** attribute:

```
<video width="320" height="240" autoplay>  
  <source src="movie.mp4" type="video/mp4"  
>  
  <source src="movie.ogg" type="video/ogg">  
Your browser does not support the video tag.  
</video>
```

**Note: Chromium browsers do not allow autoplay in most cases. However, muted autoplay is always allowed.**

Add **muted** after **autoplay** to let your video start playing automatically (but muted):

## Example

```
<video width="320" height="240" autoplay muted>  
  <source src="movie.mp4" type="video/mp4">  
  <source src="movie.ogv" type="video/ogg">  
Your browser does not support the video tag.  
</video>
```

# Browser Support

The numbers in the table specify the first browser version that fully supports the `<video>` element.

Element					
<code>&lt;video&gt;</code>	4.0	9.0	3.5	4.0	10.5

# Browser Support

The numbers in the table specify the first browser version that fully supports the `<video>` element.

# HTML Video Formats

There are three supported video formats: MP4, WebM, and Ogg.

The browser support for the different formats is:

Browser	MP4	WebM	Ogg
Edge	YES	YES	YES
Chrome	YES	YES	YES
Firefox	YES	YES	YES
Safari	YES	YES	NO
Opera	YES	YES	YES

## HTML Video - Media Types

File Format	Media Type
MP4	video/mp4
WebM	video/webm
Ogg	video/ogg

The HTML `<audio>` element is used to play an audio file on a web page.

## The HTML `<audio>` Element

To play an audio file in HTML, use the `<audio>` element:

### Example

```
<audio controls>
```

```
  <source src="horse.ogg" type="audio/ogg">
```

```
  <source src="horse.mp3" type="audio/mpeg">
```

Your browser does not support the audio element.

```
</audio>
```

# HTML Audio - How It Works

- The `controls` attribute adds audio controls, like play, pause, and volume.
- The `<source>` element allows you to specify alternative audio files which the browser may choose from.
- The browser will use the first recognized format.
- The text between the `<audio>` and `</audio>` tags will only be displayed in browsers that do not support the `<audio>` element.

# HTML <audio> Autoplay

To start an audio file automatically, use the **autoplay** attribute:

## Example

```
<audio controls autoplay>  
  <source src="horse.ogg" type="audio/ogg">  
  <source src="horse.mp3" type="audio/mpeg">  
>
```

Your browser does not support the audio element.

```
</audio>
```

```
<html>
<title>Working with Multimedia</title>
<head><h1>Let's Work with Multimedia</h1></head>
<body bgcolor=grey>
<video width="420" height="540" controls>
  <source src="movie2.mp4" type="video/mp4">
```

Your browser does not support the video tag.

```
</video>
<video width="420" height="540" controls>
  <source src="video1.mp4" type="video/mp4">
```

Your browser does not support the video tag.

```
</video>
<video width="420" height="540" autoplay muted loop>
  <source src="waves.mp4" type="video/mp4">
```

Your browser does not support the video tag.

```
</video>
</body>
</html>
```

## The <form> Element

The HTML `<form>` element is used to create an HTML form for user input:

`<form>`

•

*form elements*

•

`</form>`

The `<form>` element is a container for different types of input elements, such as: text fields, checkboxes, radio buttons, submit buttons, etc.

# The <input> Element

The HTML `<input>` element is the most used form element.

An `<input>` element can be displayed in many ways, depending on the `type` attribute.

Here are some examples:

Type	Description
<code>&lt;input type="text"&gt;</code>	Displays a single-line text input field
<code>&lt;input type="radio"&gt;</code>	Displays a radio button (for selecting one of many choices)
<code>&lt;input type="checkbox"&gt;</code>	Displays a checkbox (for selecting zero or more of many choices)
<code>&lt;input type="submit"&gt;</code>	Displays a submit button (for submitting the form)
<code>&lt;input type="button"&gt;</code>	Displays a clickable button

## Text Fields

The `<input type="text">` defines a single-line input field for text input.

## Example

A form with input fields for text:

```
<form>
  <label for="fname">First name:</label><br>
  <input type="text" id="fname" name="fname"><br>
  <label for="lname">Last name:</label><br>
  <input type="text" id="lname" name="lname">
</form>
```

---

This is how the HTML code above will be displayed in a browser:

First name:

Last name:

# Working with HTML Text Formatting

HTML contains several elements for defining text with a special meaning.

## HTML Formatting Elements

Formatting elements were designed to display special types of text:

- `<b>` - Bold text
- `<strong>` - Important text
- `<i>` - Italic text
- `<em>` - Emphasized text
- `<mark>` - Marked text
- `<small>` - Smaller text
- `<del>` - Deleted text
- `<ins>` - Inserted text
- `<sub>` - Subscript text
- `<sup>` - Superscript text

Tag	Description
<a href="#"><u>&lt;b&gt;</u></a>	Defines bold text
<a href="#"><u>&lt;em&gt;</u></a>	Defines emphasized text
<a href="#"><u>&lt;i&gt;</u></a>	Defines a part of text in an alternate voice or mood
<a href="#"><u>&lt;small&gt;</u></a>	Defines smaller text
<a href="#"><u>&lt;strong&gt;</u></a>	Defines important text
<a href="#"><u>&lt;sub&gt;</u></a>	Defines subscripted text
<a href="#"><u>&lt;sup&gt;</u></a>	Defines superscripted text
<a href="#"><u>&lt;ins&gt;</u></a>	Defines inserted text
<a href="#"><u>&lt;del&gt;</u></a>	Defines deleted text
<a href="#"><u>&lt;mark&gt;</u></a>	Defines marked/highlighted text

```
<!DOCTYPE html>
```

```
<html>
```

```
<body>
```

```
<h1>My First Heading</h1>
```

```
<p>My first paragraph.</p>
```

```
<strong>This text is important!</strong>
```

```
<small>This is some smaller text.</small>
```

```
<i> Italic text<i><br>
```

```
<em> Emphasized text</em><br>
```

```
<mark> Marked text</mark><br>
```

```
<small> Smaller text </small><br>
```

```
<del> Deleted text </del><br>
```

```
<ins> Inserted text</ins><br>
```

```
<b>this test is </b><sub> - Subscript text</sub><br>
```

```
<b>This text is </b><sup> - Superscript text</sup><br>
```

```
</body>
```

```
</html>
```

## OUTPUT

# My First Heading

My first paragraph.

**This text is important!** This is some smaller text. *Italic text*

*Emphasized text*

*Marked text*

*Smaller text*

~~*Deleted text*~~

*Inserted text*

*this test is* - <sub>*Subscript text*</sub>

*This text is* - <sup>*Superscript text*</sup>

## Working with HTML Tables

HTML tables allow web developers to arrange data into rows and columns.

Company	Contact	Country
Alfreds Futterkiste	Maria Anders	Germany
Centro comercial Moctezuma	Francisco Chang	Mexico
Ernst Handel	Roland Mendel	Austria
Island Trading	Helen Bennett	UK
Laughing Bacchus Winecellars	Yoshi Tannamuri	Canada
Magazzini Alimentari Riuniti	Giovanni Rovelli	Italy

## Define an HTML Table

**A table in HTML consists of table cells inside rows and columns.**

### Example

**A simple HTML table:**

```
<table>
  <tr>
    <th>Company</th>
    <th>Contact</th>
    <th>Country</th>
  </tr>
  <tr>
    <td>Alfreds Futterkiste</td>
    <td>Maria Anders</td>
    <td>Germany</td>
  </tr>
  <tr>
    <td>Centro comercial Moctezuma</td>
    <td>Francisco Chang</td>
    <td>Mexico</td>
  </tr>
</table>
```

# Table Cells

Each table cell is defined by a `<td>` and a `</td>` tag.

`td` stands for table data.

Everything between `<td>` and `</td>` are the content of the table cell.

Example

```
<table>
  <tr>
    <td>Emil</td>
    <td>Tobias</td>
    <td>Linus</td>
  </tr>
</table>
```

# Table Rows

Each table row starts with a `<tr>` and ends with a `</tr>` tag.

`tr` stands for table row.

# HTML Table Borders

## How To Add a Border

When you add a border to a table, you also add borders around each table cell:  
To add a border, use the CSS `border` property on `table`, `th`, and `td` elements:

Example  
`table, th, td {  
 border: 1px solid black;  
}`

## Collapsed Table Borders

To avoid having double borders like in the example above, set the CSS `border-collapse` property to `collapse`.

This will make the borders collapse into a single border:

Example  
`table, th, td {  
 border: 1px solid black;  
 border-collapse: collapse;  
}`

# Working with HTML Lists

HTML lists allow web developers to group a set of related items in lists.

## Example

### **An unordered HTML list:**

Item

Item

Item

Item

### **An ordered HTML list:**

1.First item

2.Second item

3.Third item

4.Fourth item

# Unordered HTML List

An unordered list starts with the `<ul>` tag. Each list item starts with the `<li>` tag.

The list items will be marked with bullets (small black circles) by default:

## Example

```
<ul>
  <li>Coffee</li>
  <li>Tea</li>
  <li>Milk</li>
</ul>
```

# Ordered HTML List

An ordered list starts with the `<ol>` tag. Each list item starts with the `<li>` tag.

The list items will be marked with numbers by default:

## Example

```
<ol>
  <li>Coffee</li>
  <li>Tea</li>
  <li>Milk</li>
</ol>
```

# HTML Description Lists

HTML also supports description lists.

A description list is a list of terms, with a description of each term.

The `<dl>` tag defines the description list, the `<dt>` tag defines the term (name), and the `<dd>` tag describes each term:

## Example

```
<dl>  
  <dt>Coffee</dt>  
  <dd>- black hot drink</dd>  
  <dt>Milk</dt>  
  <dd>- white cold drink</dd>  
</dl>
```

# HTML List Tags

Tag	Description
<a href="#"><u>&lt;ul&gt;</u></a>	Defines an unordered list
<a href="#"><u>&lt;ol&gt;</u></a>	Defines an ordered list
<a href="#"><u>&lt;li&gt;</u></a>	Defines a list item
<a href="#"><u>&lt;dl&gt;</u></a>	Defines a description list
<a href="#"><u>&lt;dt&gt;</u></a>	Defines a term in a description list
<a href="#"><u>&lt;dd&gt;</u></a>	Describes the term in a description list
